### DR. LILLE FEATURED ON KTAR NEWS!

KTAR News asked Dr. Lille to be an expert medical guest to discuss Gynecomastia, which is commonly known as "man-boobs". Gynecomastia relates to any condition that results in excessive development of breast tissue in males. The condition called "man-boobs" presents itself in adolescents, former body-builders and often seen in men in their 40's. The condition, which is reported to affect 40% to 60% of men, is often detectable by other individuals, but only a small fraction are being treated. Although dieting and exercise can benefit some men who have gynecomastia during their mid-life, the majority of cases require surgery for permanent resolution. Dr. Lille discussed his exceptionally successful results combining the Vaser Liposelection chest contouring technique with breast tissue removal on KTAR News. Results are seen immediately with a return to physical activity in 2 to 3 weeks. In the past 10 years, the popularity of male breast tissue reductions has doubled! Call Dr. Lille's office at 480-661-6197 in time for summer, and see Dr. Lille's website, [www.scottsdalemanboobs.com](http://www.scottsdalemanboobs.com) for more information.
